

Industrial Waste and Water Treatment Equipment

- Belt Press and Filter Press

Belt Press:-

- > Belt press operating principle is sludge being squeezed between two belts under tension. The applied pressure on the sludge increases gradually as the belts pass through a series of rollers of decreasing diameters.
- > Operate automatic and continuous.
- > Low energy consumption and operating costs.
- > Robust and compact in construction.

Filter Press:-

- > It is the most efficient equipment for sludge dewatering, via filtering slurry through filter cloth laid over the filter membranes.
- > Membrane squeezing process with a maximum pressure of 16 bar.
- > Operate manual or fully automatic via PLC control system.
